

Bennett's wallaby

Height: 3 feet

Bennett's wallabies, sometimes called red-necked wallabies, are medium-sized marsupials found along the eastern coast of Australia and on the island of Tasmania. As members of the genus *Macropus*, meaning "long foot," Bennett's wallabies are closely related to kangaroos and wallaroos. Though best known for hopping, kangaroos, wallaroos, and wallabies can also crawl and swim!
